C. W. ROSSELL.

On the Side.

Near Wetaskiwin last week while the three-hing rig of Ed Smith was working on wheat stacks, the machine was damaged when a sheaf containing a large stone securely tied in it was fed into the machine. The stone was too big to go thru the separator, or the damage would have been greater. This season, in this district, there have been reported two attempts to burn threshing machines, and another case where a new outfit had a costly belt slashed and the engine tampered with. Last fall one of the cases reported was where a machine was damaged when a sheaf loaded with a pair of horse-shoes got into the separator. An effort should be made to capture the culprits, who are doing these things, and make an example of them.

A comic paper depicts a school teacher asking this question of a little boy, "If a farmer raises 3700 bushels of wheat and sells it for \$1.00 a bushel, what will he get?" The reply is "A motor car." The farmers in these parts will have to be content with less than \$1 a bushel this season, but a good return seems in prospect, and they should have money to buy motor cars, which for them are not a luxury.

Ray's Corner

There's a young fellow in this town I'm pretty well acquainted with who'd like to meet a wealthy young lady or one with lots of do, he ain't naming which. They young lady should be matrimonially inclined, as this fellow is kinda tired of work and would like to have a happy home. Send all replies care of Me.

Hard Drinking v. Hard Eating

Vancouver Sun: If prohibitionists knew enough about the digestive system to understand just what does it most harm they would leave their liquor campaign alone in five minutes and light out on the trail of the toad hog.

Over-eating is many times as prevalent as over-drinking and infinitely more harmful.

While some 2 per cent of the people in the world die from the effects of over-indulgence in alcohol about 95 per cent die from the effects of over-indulging themselves in unnecessary and unscientific food.

While less than 1 p.c. are hard drinkers, about 98 p.c. of us are consistently hard eaters.

Moreover in the case of an average man, one injudicious meal will put more self-distilled alcohol in his digestive tract than he would put there in a week.

The liquor problem has intrigued the imaginations of many people because it has been given a moral and religious aspect. We should remember, however, that if it is immoral to drink ourselves to death, it is just as immoral to eat ourselves to death. The auto intoxicated man has strayed just as far from righteousness as the man who crooks his elbow and stands at the bar.

Either a knife, fork or spoon makes an infinitely better grave digging implement than the beer opener. A good sharp tooth should replace the skull and crossbones as our emblem of death.

A vigorous campaign against unscientific eating and over-eating would solve most of the problems that are supposed to arise from drink.

LOCAL NEWS.

Mrs. Gronback has arrived from Lamping, Sask., and is staying with her daughter, near town.

Mr. Gordon, Vegreville, the owner of the big store opposite the Royal Hotel, was in town last week.

Mr. Hal Laird has acquired an automobile.

Piper McKinnon is down from Edson this week.

F. J. Francey, J.P., Duffield, was in Stony on Tuesday.

Despite the announcement in The Sun regarding his retirement, Mr. C. E. Clarke is still holding the position of Principal at the local school.

A Prohibition meeting will be held in the Town Hall on Saturday, Oct. 20, at eight o'clock. Mr. Elmer Roper, secretary of the Trades and Labor Council will speak. Questions will be invited.

Mr. Val Mohr wishes to state that he is not agent at Stony Plain for Black Diamond coal. Mr. Mohr is agent for the Marcus Mine, and those wishing good coal should phone him.

Hog raisers were painfully surprised when marketing their hogs last week, to find that the price had dropped about 2c a lb.

The Sun has been asked to announce that the new building on Main St. is not for the Government Vendor—not yet.

A gang of navies were working on Sunday afternoon renewing the ties under the railway siding near the station.

The bad news from the School Board is out—the tax rate has been fixed at 27 mills on the \$, and tax notices have been mailed to ratepayers.

The radio room at Johnnie Miller's Garage was the busy place while the world's series of ball games were on last week, while the basketball returns from the championship games in Edmonton also drew a crowd.

I can provide you with a Life Assurance Policy to suit your particular needs. R. B. Brooks, local agent for The Sun Life Assurance Co.

A meeting was held Saturday evening of the directors of the Agricultural Society, which was well attended. A loan from the bank was arranged, to pay the prize money awarded at the recent Fair. A delegation will wait on the three municipalities interested in the Fair, to seek the usual donations toward the upkeep of the Society's annual event.

British Empire Preferences

The ties that hold the British Empire together, or rather the lack of any hard and fast constitutional obligations, are a source of constant worry to some people and a few newspaper and magazine writers seem to labor under a delusion that to them has been entrusted the task of saving the Empire from speedy dissolution.

One group advocates the creation of an Empire Parliament, with Ministers of the Overseas Dominions resident in London, a common foreign policy, and a definite scheme of Empire defence, naval and military. In other words, this group stands for a greater degree of centralization. Unless this is attained, are told the Empire must inevitably go to pieces.

Opposed to this policy, certain other publicists seem to suffer from a continual nightmare that the liberties and autonomous powers of the Dominions are really in danger and that a serious effort is being made to place the far-flung portions of the Empire abjectly under the thumb of Downing Street.

The truth is, of course, that both these groups are unnecessarily alarming themselves, while at the same time wasting valuable time and good paper and ink in endeavoring to arouse the people over something which is not worrying them in the slightest.

The British Empire is, after all, a mother country with a healthy family of grown up sons. While these sons were very little chaps, mother looked after them and directed their more important affairs for them. But as the boys grew up they were gradually given larger liberty of decision and action for themselves. That is, the Empire has evolved and continues to evolve in exactly the same way as the average family. Any father or mother deserving of the name is proud and happy to see the children grow up, develop character, become self-reliant, independent and prosperous.

In the family circle it is not demanded that as the children grow up they shall sign some formal document declaring their love and loyalty to father and mother and binding themselves to discharge certain duties towards them and accept certain responsibilities on their behalf.

That love and loyalty exists, and that all this there is to it. No matter how the children may grow up, how far scattered around the world they may be, and irrespective of the individual interests which may be developed by each, there yet remains a common bond which remains strong and unbreakable. In principle their chief interests are one, and each and all can rely on the others. What benefits one indirectly benefits all, although not necessarily to the same extent, and loss to one indirectly and adversely affects all.

The same principle holds good in the case of the British Empire. The analogy is perfect. Australia may be vitally interested in something which only remotely, if at all, affects Canada. But if Australia in working out that particular problem gains in strength and becomes more contented and prosperous, it makes for Canada's gain indirectly. If anyone doubts this, let him recall what the strength of each of the Dominions meant to the others in the Great War, when, combined, they placed over one million soldiers in the field, and, as Lloyd George declared at Ottawa the other day, had it not been so the history of the world would have to be rewritten.

There may be times and questions where the interests of various parts of the Empire may come into conflict, just as occasions arise when the interests of individual members of a family do not parallel each other but sharply diverge. This would happen just the same if each was an independent, sovereign nation. But because all are members of one family, a greater degree of consideration for each other is shown. There is a willingness to compromise, to adopt a mutual policy of give and take, which in the end benefits all.

There are, however, many ways in which the mother country and each of the Dominions can directly assist the others, without involving them in any form of centralized government or control, which might at times prove friction and lead to irritation resulting in friction and a loss of that sentiment and unity of purpose now characterizing the Empire as a whole.

Other countries are working out policies for their own particular benefit regardless of the effect on other peoples and nations. France seeks to impose her own will and policy on Europe; Russia, under the Soviet regime, would convert the whole world to the theories of communism; the United States erects a tariff against the world in the belief that it is conducive to the prosperity of the republic.

Why, then, should not the British Empire develop voluntary preferences to a far greater extent than heretofore from its several parts and thereby confer mutual advantages on each other adding strength and prosperity to the whole. And this can be done without adopting the dangerous policy of centralization of authority, without in the slightest degree lessening the autonomy of each Dominion, and, so far from weakening, result in strengthening the ties of Empire.

ZR-3 Will Soon Fly Across Atlantic

German-Built Navy Airplane Almost Ready For Voyage

The ZR-3, German-built sister to the navy airplane ZR-1, is expected to leave Friedrichshafen early in November for her trans-Atlantic voyage to her future home at Lakehurst, N.J. A station ship will be placed in mid-ocean to direct the big craft, and the Weather Bureau, Shipping Board and other government agencies are preparing to co-operate in furnishing the latest meteorological data.

The planned route is across South America, thence to the Azores, to the southern tip of Bermuda and north to destination. The route covers 4,600 nautical miles or a distance nearly one-third greater than the "air-line" across England, Newfoundland and Nova Scotia. The flight is to be made "without intermediate stop." At average "gait" the ZR-3 is expected to take 140 hours for her homeward trip.

The German ship was built as a commercial craft. Provision has been made for twenty passengers on long flights, or thirty on short voyages.

Corns, Warts, Bunions, Painlessly Removed

Don't limp any longer, don't suffer another hour from corns. The oldest remedy and the best, the one that for fifty years has proved a true success, will lift out your corns in a hurry. Putnam's Painless Corn and Wart Extractor is the one remedy to use. Refuse a substitute, 25c everywhere.

B.C. Lumber Production

Nearly five hundred saw and shingle mills in British Columbia are producing annually approximately three and a half billion feet of lumber and about the same number of shingles. This year the lumber production of the province is estimated to be worth \$16,000,000, and a survey of world markets gives promise of a steady increase in the next decade.

BABY'S OWN TABLETS AN EXCELLENT REMEDY

When the baby is ill—when he is constipated, has indigestion, colds, colic, or simply fever or any of the other many minor ills of little ones—the mother will find Baby's Own Tablets an excellent remedy. They regulate the stomach and bowels, thus banishing the cause of most of the ills of childhood. Concerning them Mrs. E. D. Dugway, Thunder River, Que., says:—"My baby was a great sufferer from colic and cried continually. I began giving him Baby's Own Tablets for the relief was wonderful. I now always keep a supply of the Tablets in the house." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

One of the needs of the hour is a pocket airplane that will enable the pedestrian to fly across the street.—Boston Transcript.

The Oil for the Farmer—A bottle of Dr. Thomas' Electric Oil in the farm house will save many a journey for the doctor. It is not only good for the children when taken with colds and croup, and for the mature who suffer from pains and aches, but there are directions for its use on sick cattle. There should always be a bottle of it in the house.

Every day for two years 35,000 war service medals have been engraved with the recipient's name by an English firm of medal makers.

Minard's Liniment for Corns

Coal Production in Alberta
According to figures provided by the preliminary report on mineral production in Canada for the first six months of 1923, Alberta has produced in those six months a total of 3,812,991 tons of coal, compared with 2,358,296 in the same period of 1922.

Especially for women who live on farms

Aunt Jemima Pancakes—thousands of farm families have them regularly these days. They're so easy to get and their old-time Southern flavor makes a hit with everyone.
Now, in response to requests, Aunt Jemima Pancake Flour comes in larger packages, nearly three times as large as the regular cartons. More convenient; more economical. No waste from spilling as with sacks. But the same flour—Aunt Jemima's famous Southern recipe ready mixed.
Ask your grocer for the big Aunt Jemima package.
"Use in town, Home!"

AUNT JEMIMA PANCAKE FLOUR

Great Oaks from Little Acorns Grow

IT'S the careful systematic saving of small sums each month that enables men and women to become heirs of good Bonds and so establish themselves on the road to financial independence.

Our Partial Payment Plan for Buying Bonds has been devised particularly for those who wish to draw up a conservative, workable plan of saving and investing a portion of their income. The Plan is quite simple and will appeal to those who wish to secure the maximum income return, consistent with safety.

Buying Bonds on the Partial Payment Plan is fully described in a special booklet. Use the coupon below to obtain a copy and full particulars as to how you can become the owner of a safe \$500 or \$1,000 bond during the next few months.

World's Time For Radio

Map Eliminates Need for Calculation By Berlin Operators

At the immense new central transmitting station in Berlin, it was found that the Berlin operators should know the exact time in any other part of the world at a given moment. Some form of clock was found necessary, that would indicate day and night, and simultaneously indicate the time at all other important radio stations throughout the world. A map of the world was therefore placed on a circular glass dial, on the outer edge of which two twelve-hour scales were graduated at five-minute intervals. This dial, being darkened around half the edge, to indicate where it is night, is moved around by clockwork. Arrows extend from the stations on the map to the edge, indicating the approximate times at any given moment. The entire device, moving across the shaded area, eliminates need for calculation by the operator.

The Poor Man's Friend.—Put up in small bottles for a very small size, Dr. Thomas' Electric Oil possesses power and concentrated form. Its cheapness and the varied uses to which it can be put make it the poor man's friend. No dealer's stock is complete without it.

Game Invented 3,000 Years Ago

The Chinese game, Mah Jongg, which has been America by storm and which is being played in London, Paris and other world centres, was invented 3,000 years ago by a Chinese fisherman who whiled away the time during storms playing the game with his employees.

Diamonds may be black as well as white, and some are blue, red, yellow, green, pink and orange, but there is no violet diamond, although, in addition to amethysts, there are sapphires, rubies and garnets of that color.

For the Guidance of Youth

This is from a French manual for the guidance of youth, first published in 1712, which ran through 50 editions in the course of the Eighteenth Century. "For the sake of cleanliness it is well to rub the face every morning with a white towel in order to remove the dirt. It is not advisable to wash with water, for this exposes the face to the chills of winter and the heats of summer." A similar work, published in 1667, warns children that "to wash the face in water injures the eyesight, brings on toothaches and colds and engenders pallor."

Scientist Of Carnegie Institute Believes Centre Of The Earth To Be Mass Of Solid Gold

"The heart of the earth," says a new theory, "is a heart of gold." At the very centre of the globe there may be millions of tons of gold and silver and platinum and the other heavy metals.

This is not mere phantastic speculation, but sober deduction from the most critical investigation ever made in the chemistry of the earth's crust—an investigation conducted by the acknowledged world authority on this subject, Dr. Henry S. Washington, of the Carnegie Institution of Washington, D.C.

Dr. Washington, studying over 5,000 trustworthy chemical analyses of the crust of the earth, found that the elements common in the crust are exclusively those of lighter weight. The heavier elements occur only in the most minute proportions. Gold, for instance, composes less than one-millionth of one per cent. of the earth's crust.

Yet Dr. Washington thinks it is improbable that these heavier elements are always lacking. Then where is Mother Earth's missing quota of gold, platinum and other heavy elements? Have they hidden themselves away out of reach?

Dr. Washington believes that they have. He thinks that the earth was once molten. While it was in this condition the lighter elements rose to the surface; the heavier ones sank. He thinks that millions of tons of the missing elements are inside the earth now.

At the very centre he would expect to find a core of the heaviest elements—such as platinum, gold, antimony and osmium, the latter the heaviest known substance, unfamiliar to all but that natural alloy, "indium," used for the tips of gold pens. Outside this sphere of precious metals there is, perhaps, a zone of those elements that are little less heavy—copper, silver and lead. If there is a zone of iron, as Dr. Washington thinks there is, it presumably comes next. Clear outside, on top of all the metallic zones, is the surface layer of the lightest elements—the slag layer, the rocky crust on which we live.

If this is true, where do the veins of gold, silver, and copper that are mined by the earth's crust come from? The generally accepted scientific answer is that they have been brought upward by seepage of hot mineralized water from the depths of the earth. More than 50 years ago the great English scientist, Lord Kelvin, pointed out that an earth consisting of a thin solid crust surrounding a liquid interglaze would never be able to withstand the tidal pull of the sun and the moon. It is this pull of the heavenly bodies that makes the tides stronger in the ocean. Now the pull is just as strong, or stronger, on the land. Why, then, are there no tidal waves in the solid ground as there are in the sea? Obviously, just because it is solid—because the land is too firm and rigid to yield to the tidal pull the way the water does.

Lord Kelvin figured out in tons the amount of these tidal pulls on the land. They were stupendous; many times larger than any possible resisting strength of the 50 or 60-mile crust then supposed to constitute the only solid part of the globe. If we really tried to live on a thin, rocky crust floating on a sea of liquid lava, we should not last one day. Inside of 24 hours the solid ground would smash under our feet. Twice each day a vast wave of melted rock, hundreds of feet high, would roll round inside the shell of the earth, bursting through it and overwhelming every vestige of anything solid.

There actually does exist, it is true, in the land as well as in the ocean, a tide, but it is a few inches high instead of hundreds of feet. It is the kind of tidal rise and fall that would happen in a very rigid solid—not in a ball of crusted liquid. We may be quite sure, then, that the earth as a whole is a huge solid ball of solids.

This view Prof. Hobbie has lately brought out in his book, "Earth Evolution and Its Facial Depression," though he prefers the word "rigid" to the word "solid," for rigidly is only one of the properties of solids. Under the tremendous pressure and temperatures, inside the

earth, it is possible that the properties of matter are not the same as we know them on the surface. Things may be "rigid" and still lack some other property of "solids." Prof. Hobbie explains the origin of such a rigid earth among the blazing, gaseous stars of space by reference to a new theory of how the earth was formed—the so-called "planetesimal hypothesis."

This hypothesis begins by imagining the sun as a single star, a little larger and hotter probably than it is now. There were no planets sweeping around it then. Along came another star. It happened to pass so close to the sun that the gravitational attraction between the two bodies pulled out a lot of the matter from the sun.

These enormous pulled-out "drops" of matter began to revolve about the sun. In time, as they collided with one another, sticking together when they struck, they gathered into great lumps. These lumps are the planets we know today—Venus, Mars and the others, also the earth.

Probably the laziest people in the world are the Sivatians, who live in the inaccessible mountain range between the Black and Caspian Seas. They have made no advance toward civilization in 2,500 years. It is their invariable rule to observe holidays four times a week, with saints' days as extras.

Salt In Canada

Ontario Continues to be the Chief Producer of this Commodity

The output of salt from all sources in Canada during 1922 totalled 183,438 tons, of which quantity approximately 99 per cent., or 181,794 tons, valued at \$1,628,322, was marketed. Compared with the sales for the previous year, the 1922 records showed an increase of 10,811 tons, or 6.6 per cent. in quantity, and a decrease of \$45,362, or 2.7 per cent. in value.

Ontario continued to be the chief producer, contributing 87.3 per cent. of the total sales. Nova Scotia shipments, from the Melogash mine, amounted to 5,053 tons common coarse, hard and rock salt.

Amundsen's Airplane

For Trade Route

Explorer's Machine May Fly in Commercial Line at Coast

Plans to place Captain Roald Amundsen's airplane, a five-passenger limousine Junker, which was to have flown across the North Pole, in commercial air passenger service between Seattle and Vancouver, B.C., were announced at Seattle by A. H. Hammer, Amundsen's business agent. Several Seattle capitalists, who are negotiating for the purchase of the machine, intend to make it one of a fleet of planes for northwest service, Hammer stated.

Angora Orders Red Cross Closed

The Government of Angora has ordered the closing of all foreign hospitals and Red Cross establishments in Constantinople and forbidden foreign doctors and dentists to practice, according to a Constantinople dispatch to the London Daily Express.

Tidal Flow Of U. S. Settlers To Western Canada Has Reached Record Proportions

Paper Plant In West

Plant Near Winnipeg to Have Initial Capacity of 120 Tons Per Day

Erection of the first pulp and paper plant in the prairie provinces at a cost of \$3,000,000 has begun near Winnipeg. The plant will have an initial capacity of 120 tons of newsprint a day and will, it is believed, furnish paper to the middle-western market of the United States.

Location of the plant in the west, it is said, is an indication of the expansion of the Canadian newspaper industry. It was once thought that the pulpwood supplies of the prairie provinces would not be called into requisition for years, but the increased consumption of the middle-western states and their proximity to the prairie provinces has brought about the demand. Newsprint production in the Dominion rose from 690,250 tons in 1921 to 1,231,264 tons in 1922 and this year, it is reported, it will show even greater gains.

Manitoba Fisheries

Approximately 3,000,000 pounds of dressed fish were taken from the Winnipeg Lake this year, according to advices received in Winnipeg. Fishing was not good this year, and as it appeared unlikely that the total summer catch would exceed 2,000,000 pounds, it was found advisable to extend the season to help relieve the position of the fishermen.

Few people would credit the extent to which the American people have come to permeate the Canadian Dominion, especially the western provinces, in recent years. In the year 1871, when the first census of the newly federated Dominion was taken, Canada was found to have a population of 2,485,761, and of these 24,162 recorded their birthplace as the United States. This was equivalent to not quite seven-tenths of 1 per cent. of the total population. At the time of the 1901 census there were 127,899 citizens of American birth in Canada. In that of 1911 there were 303,650, representing 4.1 per cent. of the total population at the time. From 1911 to 1921 a total of 748,118 citizens of the United States entered Canada, so that at the present time there are well over 1,000,000 people in Canada who have been citizens of the United States, or something like 15 per cent. of the total Dominion population.

The tidal flow of United States settlers to Canada started with the offering of free Crown lands as homesteads, and inducement that drew prospective settlers from every country of the globe. The American immigration tide has always been of prime value, because it is most purely an agricultural one. Nearly the entire aggregate of American settlers is to be found in the western provinces, where they have either homesteaded or purchased land. Between the years 1897 and 1919 some 27 per cent. of United States settlers coming to Western Canada made application for homesteads, as against 18 per cent. of British nationality, and when it is considered that more Americans buy improved farms than newcomers from any other country, the extent to which they are developing Canadian agricultural lands may be appreciated. Since the government there open its Crown lands and initiated its homestead policy, about 100,000,000 acres have been settled, and United States citizens have accounted for 26 per cent. of such settlement, as against 20 per cent. of filings on the part of settlers from the British Isles.

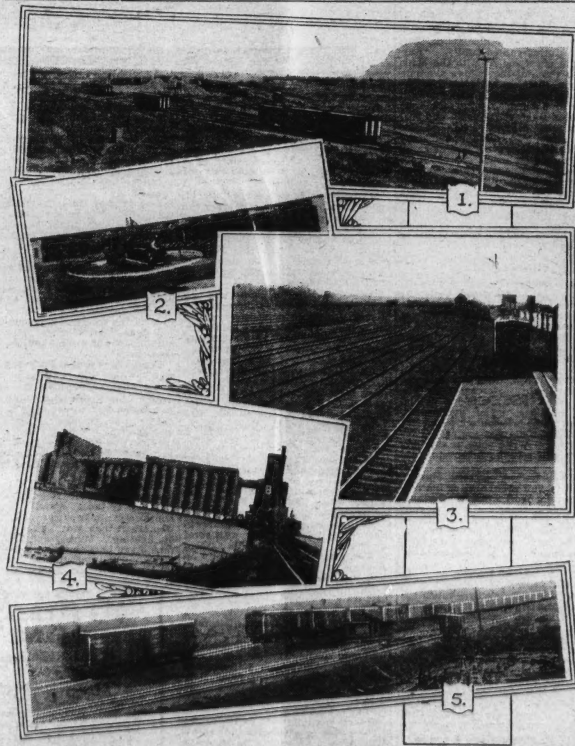

Since the war, owing to the disturbance in economic conditions, no less than to Canada's immigration policy, the flow from the United States has to some extent fallen off. The maintenance was in the ascendancy when the war broke out; in 1912, the record year, some 129,009 American citizens crossed the border. After the war the average contribution was about 50,000 per annum until 1922, when only some 24,000 arrived. The Republic's donation is still of the same high quality, however, and almost purely agricultural. Though the extent of homesteaded land is rapidly diminishing, American settlers come to Canada with ample funds to purchase large acreages. In the not inconsiderable total of 7,349 homesteaded filings in 1922, Americans took second place.

A further aspect of this United States immigration tide which makes it so desirable from Canada's point of view is the amount of wealth it carries with it. Most United States immigrants are farmers who have sold out high-priced lands with the intention of either re-investing or purchasing low-priced lands of large extent in Canada, and who arrive furnished with considerable funds and fully equipped to initiate their new enterprises immediately. The average immigrant from the United States is much richer than the immigrant from any other country. It is estimated that the average wealth of the British immigrant to Canada in a few years reaches \$100, while that of other nationalities is considerably less. Against this, to review only recent years, the average wealth brought in by each United States immigrant in 1913 was \$242; in 1920, \$272; in 1921, \$312; and in 1922, \$402. In 1919 the volume of United States immigration to Canada was responsible for bringing into the country about \$14,000,000; in 1920 about \$18,500,000; in 1921, \$14,000,000; and in 1922 about \$10,000,000.—E. I. Chinnott in The Current History Magazine.

Observant Child

"Mother, must I wash my face?"
"Yes."
"Why can't I powder it like you do?"—Tyribana, Christiana.

CANADIAN NATIONAL OPENS ONE OF WORLD'S LARGEST RAILWAY YARDS FOR GRAIN

Some idea of the extent of the Neehing Terminal opened at Fort William this fall by the Canadian National Railways is given by the above pictures, showing part of the 45 mile trackage with capacity for 2,000 cars. This new terminal is doing much to minimize the possibility of grain car congestion on Canadian National lines at the head of the lakes; expedite delivery of grain to elevators for shipment down the lakes and also the movement of other "loads" and "empties" both east and west and thus further improve the transportation service provided. Views shown are as follows:

- 1—Classification yard looking eastward from the "hump."
- 2—Twenty-four stall round-house with electrically operated turntable in the foreground.
- 3—View from centre of the classification yard, showing car coming from "hump."
- 4—Eight and one-half million bushel elevator at Fort Arthur, owned by Canadian National Railways, the picture showing grain going into elevator from cars at one end and being loaded on boat at the other.
- 5—The "hump" where the force of gravity is the only power used in placing cars in the classification tracks assigned to them. Two cars have just been released and are shown on their way to classification yard.

Straight Talk On Danger of Colds

Let your cold gain headway, and you can't keep it from running into Catarrh.

Catarrh never stays in the same place—it travels down the lungs—then it's Consumption.

Drive colds and Catarrh right out of your system while you have the chance.

Easily done by inhaling CATARRHOZONE, which instantly reaches the true source of the trouble and gets right where the living germ of Catarrh is working.

CATARRHOZONE is full of healing balancings and essences, and is able to patch up the sore spots and remove that tender, sensitive feeling from the nose and throat.

Hawking and spitting cease, because the discharge is stopped. The nostrils are cleared, headache is relieved, breath is purified. Every trace of Catarrh, bronchial and throat weakness is permanently removed.

Get CATARRHOZONE today: month's treatment \$1.00; small size 50c. Sold by all druggists, or by mail from The Catarthozone Co., Montreal.

Murray and I made it a point to go to Teddy's club dances whenever he asked us, and we had several of his friends at the dances. There really was nothing wrong with them, in most cases, except youth. The boys were like Teddy, four or five years younger, and somewhat dissipated men of the world, but really only growing children under it. And the girls were "good sports," amazingly self-possessed, and always effective, whether they were pretty or not.

"Am I so old, or just old-fashioned?" I asked Murray one night after our guests had gone.

He laughed.

Neither, you are just different," he replied. "It was a lovely war, Margaret-Anne. You and I are anti-bellum, there is a whole era between us and those youngsters. The calendar has nothing to do with it."

I fancy he was right. And perhaps if more people were as Mr. Murray there would be less criticism of the present generation. As to Teddy, the boy was so transparently frank that we always knew where he was and what he was doing, almost what he was thinking, and I think it really that with our home as a sort of anchor he could never go very far astray.

He had not lost his boyish admiration for Murray, and from the first he let me take the place of the sisters he must have missed. And the twins were devoted to him—one of his most lovable traits was that even in public he was never embarrassed by their demonstrativeness.

Whether it was the coming of the warmer weather or the result of the winter's cold I do not know, but as spring advanced it was evident that Murray's condition had ceased to improve.

For some time he had been gaining in weight and sleeping well, but a recurrence of the stomach trouble quickly pulled him down. He himself made light of the revivals, but I, especially as he refused to consult a doctor, and would not hear of staying home from the office with chills and a violent headache, and before morning I had to send for the nearest doctor.

Dr. Sutherland was, luckily for us, an overzealous man, and it took me only a moment to explain Murray's case to him. He looked very serious during the examination, but he assured me, when he followed me to the dining room afterwards, that there was no immediate danger.

"We'll get him into hospital at once," he said. "His general condition is none too good, and he has a nasty touch of pleurisy, but I see no reason why he should not pull through safely. I don't know if you understand these cases," he added, "your

husband had a fine constitution to begin with, I should think, but that rotten gas has undermined it pretty thoroughly. He'll need the best of care for a while, and then if I were you I'd get him out of the city. An office is no place for him for the next few years."

So Murray was taken to the General, and Teddy came out to stay with me and the twins. It was an anxious time for us all, for Murray was very, very ill. Everything seemed to have gone wrong at once, and for the first ten days I merely lived from hour to hour on Dr. Sutherland's repeated assurances that we would "pull him through yet." After that there was a gradual but very slow improvement. Murray was as weak as a baby, as shabby as when he first came home, and it was more than a month before he could leave the hospital. I was so glad then that I had found our cottage in the suburbs, for had we been living in rooms downtown I should have had to send him away. As it was, he had fresh air and quiet at home, and it was not long before he began to speak of going back to the office.

For a few days Teddy and I put him off on one excuse or another whenever he spoke of returning to work, but when he was no longer to be satisfied I did him what Dr. Sutherland had said the night I called him in. It was one of the hardest things I have ever done.

Murray turned very white, and I wished I had left the task of telling him to the Doctor.

"You must give me time to get used to the idea," he said at last. "I never thought of this. I suppose the Doctor means that I must go farming if I don't want to end in Ninette—it is rather a bad prospect for you and the children."

Teddy's noisy entrance saved the situation, for I felt like weeping on Murray's shoulder, and that would have been bad for us both.

Teddy had overheard a part of our conversation, and with his usual impulsiveness he jumped into the middle of it.

"Did I hear someone say 'farming'?" he asked. "Sure we are going farming, every last man of us. Margaret-Anne and I had it all planned weeks ago, while you were making love to the nurses, didn't we, Sister?"

"Well, hardly planned," I said, in reply to Murray's look of enquiry. I told Teddy what the Doctor said, and he declares that wherever we go he will go too.

"Sure, old man," said Teddy seriously. "I've got so used to being a family man while you were away that I'd miss the responsibility if it were removed—that is a nice touch, isn't it?" as Murray smiled faintly. "Any way, I'm about fed up with the bank."

Two or three of the fellows are quitting and talking of going North—Jenkinson has an uncle who knows a place three hundred miles out from Edmonton where there is oil and coal and maybe copper. I don't know if it could go to a place like that and stake a couple of claims we might clean up a million or so each. Of course, with less enthusiasm, "we couldn't" stay to take the kids to a mining camp, but maybe he'll send us to Edmonton for a while. However, I'm with you whatever you do. I don't know much, but I can stand as a horse and I'll come if I'm handy somewhere."

CHAPTER NINE

"I read about two miles from the town in the Okanagan Valley," I ten acres from the Free Press. "Fine young orchard, will bear next season. Good pasture and water. Close to school and church. A bargain for anyone who can put up a good cash payment."

"It sounds good, doesn't it?" I asked. "And here is another: 'Beautiful Vancouver island, the place with the perfect climate. Acres near Victoria, some plots with houses and other buildings, some unimproved. Buy now while prices are low and live comfortably while you are paying for your home. Write soon as this proposition will soon be taken up. No agents.'"

"It sounds good," agreed Murray, "but all I know about fruit is the commoner's side, and I don't feel like taking too big a chance. Just between ourselves, I am inclined to stick to the Winnipeg district, then if the bottom falls out of our 'back to the land' scheme there'll always be some sort of a job I can get."

"But the climate," I began.

Dr. Sutherland did not say I needed a warm climate," Murray interrupted, "his prescription was an outdoor life with as much manual labor as I could stand. It's in a town that reminded me of Teddy at his best, we could get something within a hundred miles of the city, at a satisfactory price, we could vegetate for two or three years while the children are small, and then sell out and come back, perhaps we might even make something on the deal to help with

the air-castle. I rather lean to the rough sort country that the wheat farmers have passed—like the district around the Pine Ridge Golf Links, you know—the trouble is that in most cases such places have been settled by foreigners. I'm not keen on one hundred and sixty acres of wheat land, but I do want more or less congenial neighbors."

Murray was almost himself again, and the more we talked of leaving the city for a time the more the Doctor's advice appealed to us. Dr. Sutherland had told us frankly that Murray had no organic disease, but that he was in so weakened a condition that if he were to regain his health he must change his mode of life.

"You are young," he said, "and two or three years now may mean twenty later on. I do not want to alarm you needlessly, but my candid opinion is that if you were to run up against an active and enterprising T.B. germ just now your chances would not be worth much. Mrs. Alwyn told me that she does not care where she lives, and those twins surely need room for expansion, so if you take my advice you'll get out as quickly as possible."

Dr. Sutherland was right, it made little difference to me where I lived. But he had been brought up on a farm, and I am sure he never suspected my absolute ignorance of everything but city life. Even Murray was better off in that respect than I, he could remember when his father had been a country minister, and even afterwards, when his home was in a small town, they were always in touch with rural conditions. I hid my doubts as best I could, glad to see Murray really interested in the scheme, and joked about my "tenderfoot" stupidity.

"You'll have to teach me everything," I told Murray. "Thank goodness I'm domestic in my tastes, you know that I had learned to milk and to make butter while I was at Constance. Margaret and I besides I've heard Mother say that her grandfather carried a potash kettle ninety miles through the bush to the Montreal, so surely I'll be able to manage without electricity and running water."

Murray was impressed to the extent of not asking me what a potash kettle was which was fortunate, as I did not know myself.

Murray had gone back to the office with the understanding that he should leave as soon as we found our farm. He was really feeling very well, but I was anxious to get him out of the city. Dr. Sutherland had frightened me properly.

Naturally our friends were much interested in our plans and had advice to burn. Some of them thought Murray foolish not to take under the Soldiers' Settlement Board, but he felt that as our venture was to be only a temporary expedient he was not morally entitled to the grant. Then, too,

he hated the thought of being what he called "under K.R. and O." again. "We are not going out with the intention of staying, or of making money," he would explain. "We'll be lucky if we break even, and we don't want to worry about meeting payments. Margaret-Anne and I are simply going on a lengthy camping expedition—provided we can find the camp."

And at that time the finding of a camp seemed to be our greatest problem. Murray's illness had made a large hole in our bank account, and every "prospect" required a larger first payment than we were able to make. Had Murray been strong and experienced we might have taken one of the farms described as "a going concern," and trusted to luck and labor and the weather that we would be able to meet the deferred payments as they fell due. But Murray must have nothing to worry him, and the search continued.

With days passed quickly and it was well on into the summer before we found what we wanted.

About ten o'clock one morning Murray telephoned to say that he would not be home for lunch. Early in the afternoon he telephoned again to say that he was bringing a guest for dinner, and, he added, "look your prettiest and feed him well, for I think he owns our farm."

I shall always have a soft spot in my heart for "Dicksie" Herrington. He was one of those awfully pleasant, hopelessly impractical Englishmen who laugh their way through life and die fighting. Murray and I both took him at once, and by the time he had eaten the best dinner I could cook he was telling us his life history.

such a way that the blanks were not hard to fill.

He had gone to France as a private with the first Territorials. "Didn't want to get a commission until I was sure I shouldn't run under fire, you know," he explained. And he had only seen a few weeks' service when a premature bomb explosion left him with one eye and three fingers "missing off parade."

"I can't imagine yet how the belly thing went off," he told us. "Of course I am a fearful ass about machinery, but the instructor we had that day stammered badly, so I suppose I was rather more stupid than usual. You see, old White-bang began to say 'D-d-d-d,' and I took it for his usual endearing form of address—imagine my surprise when he told the Major afterwards that he had been ordering me to 'Drop that bomb' for half a minute before it exploded."

(To be continued)

Would Make Huge Loaf

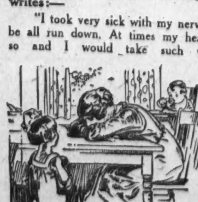

If all the people who average person eats in a year were baked in one loaf, it would take three strong men to lift it and a horse to pull it. The weight of the loaf would be 397 pounds.

Canada's Butter Imports

In the fiscal year Canada imported 1,262,000 pounds of butter from the United States, 297,000 pounds from Australia, and 2,254,000 pounds from New Zealand. The total exports of Canadian butter were 8,430,000 pounds.

"My Heart Would Palpitate, I Had Weak Spells"

Mrs. L. Whiting, 202 King St. West, Brockville, Ont., writes:—

"I took very sick with my nerves and stomach, and seemed to be all run down. At times my heart would flutter and palpitate so and I would take such weak spells in the pit of my stomach that I would never get better. I had almost given up hope when a friend advised the use of Dr. Chase's Nerve Food. I did not stop until I had taken twenty-five boxes. It has done wonders for me and I want to recommend it to everyone."

DR. CHASE'S NERVE FOOD

60 Cent a box, all dealers, or Edmondson, Balfour & Co., Ltd., Toronto

CHILDREN CRY FOR "CASTORIA"

A Harmless Substitute for Castor Oil, Purgative, Drops and Soothing Syrups — No Narcotics!

Mother! Fletcher's Castoria has been in use for over 30 years to relieve babies and children of Constipation, Flatulency, Wind, Colic and Diarrhoea; allaying Feverishness arising therefrom, and, by regulating the stomach and bowels, aids the assimilation of food; giving natural sleep without opiates. The genuine bears signature of

W. D. Fletcher.

W. D. Fletcher.

Britain Would Lend Financial Assistance In Dominion Development

London.—The British Government has submitted further proposals to the Imperial Economic Conference. There has been offered the Dominions an increased tariff preference on certain articles and one of financial co-operation in development schemes.

The financial proposals come under two heads, the first applying more particularly to crown colonies, (1)—a guarantee of interest and capital invested in development schemes; (2)—an advance of part of the interest over a period in respect to anticipated schemes put in hand before normal time.

The proposals are in reality an extension of the Dominions and the Crown colonies of financial assistance which the British Government has been giving local authorities and public utility companies at home. To the offer, conditions are attached. These are mainly that the enterprise assisted must be for the general development of public utilities similar to those assisted in Great Britain; that development would obviously have to be accelerated by the adoption of the scheme; that orders would be placed in Great Britain; that there would have to be some form of joint responsibility with the overseas government.

The Dominion representatives received the proposals favorably. Sir Lomer Gouin observed that Canada was becoming an industrial, as well as an agricultural, country. Canada was pretty well provided for at present with such public utilities as harbors, railways and electric light plants, to which the proposals more particularly referred. Further, it would be a little difficult to promise unconditionally that orders for equipment would go to British manufacturers, as Canadian manufacturers would naturally want a chance. However, he did not want to discourage the British Government. The Canadian representative recognized the spirit in which the offer had been made and would consider it carefully.

Premier Warren, of Newfoundland, approved of the principle of the proposals.

Premier Bruce of the Australian commonwealth, thought the proposals would be beneficial to his country, where there was a limit to the burden of interest which the people could bear. The British Government, said Premier Bruce, had shown great statesmanship.

End Stomach Trouble, Gas Or Indigestion

"Pape's Diaphepsin" is the quickest, surest relief for indigestion, gas, flatulence, heartburn, sourness, fermentation or stomach distress caused by acidity. A few tablets give almost immediate stomach relief. Correct your stomach and digestion now for a few cents. Druggists sell millions of packages of Pape's Diaphepsin.

Storm Takes Heavy Toll
St. Johns, Nfld.—Twenty to thirty lives, in addition to those already reported, may have been taken by the hurricane which swept the Atlantic the first of this month, and four Newfoundland vessels are being anxiously awaited at Newfoundland ports, with the hope that they may yet arrive and dispel the fears concerning them. None of the vessels have been reported.

Don't Neglect Your Skin

Ladies—A few days' treatment with **CARTER'S LITTLE LIVER PILLS** will do more to clean up the skin than all the beauty treatments in creation. Imperfect complexion is caused by a sluggish liver.

Millions of people, old, young and middle-aged, have found that a few boxes of **Carter's Little Liver Pills** have cured their skin troubles, and have brought about a new era of beauty and health. The pills are a mild, non-toxic, and non-habit-forming remedy of constipation.

Small Pills—Small Dose—Small Price

Dr. Banting Makes New Discovery

Discoverer of Insulin to Make Announcement of Greater Importance

Hamilton, Ont.—Dr. F. G. Banting, discoverer of insulin, within the next few weeks will announce another discovery of even greater importance than the diabetes cure, Hon. Dr. Forbes Godfrey, Minister of Health for Ontario, announced here at a dinner of medical men.

"Dr. Banting is a real genius," said the speaker. "He has now something better than insulin to offer the world. It is a marvelous thing, but I am not at liberty to make further mention of it. Dr. Banting has about completed his new discovery and announcement will be made very soon."

ASPIRIN

Say "Bayer" and Insist!

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product proved safe by millions and prescribed by physicians over twenty-three years for Colds, Headache, Lumbago, Earache, Rheumatism, Neuritis, Pain, Pain.

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark (registered in Canada) of Bayer Manufacturing of Monacettelcenter of Salicylic Acid. While it is well known that Aspirin means Bayer manufacture, to assist the public against imitations the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

Oil Company Will Continue Operations

Intend to Resume Boring at Fort Norman Next Year

Toronto.—The Imperial Oil Company will not suspend operations in the northwest. Vice-President A. M. McQueen who is in charge of production, states that it was the present intention of the company to send in at least one crew to Fort Norman next year with a view to deepening the Discovery Well or sinking a deep hole alongside it.

It is also possible that work will be continued on the well at Blue Fish Creek, which is down 495 feet, but which was left alone this season through lack of drilling crews. Two other wells sunk in the Fort Norman district, numbers C and D, are both understood to have been abandoned.

Ontario Will Float Forty Million Loan

Bonds Will Be Offered In Other Provinces As Well

Toronto.—Following the successful marketing of the Dominion of Canada loan which was so extensively over-subscribed, the province of Ontario has arranged for a syndicate to handle a \$40,000,000 loan. In a statement issued, W. H. Price, Provincial Treasurer, announces "having concluded arrangements with a strong syndicate to handle \$40,000,000 province of Ontario five per cent. bonds due at the end of 25 years."

It is understood that the price is considerably better than the province received by public tender for the proposed issue of \$15,000,000, and declined, recently. The bonds will be offered not only in Ontario, but in the other provinces as well.

WESTERN EDITORS

Shareholders Must Pay

Liquidator of Home Bank to Take Action to Collect Unpaid Balances

Toronto.—The Liquidator of the Home Bank, G. T. Clarkson, is at work upon the list of shareholders, and as soon as this is prepared some action will be taken to collect the unpaid balances on shares. There are about 175 shareholders who have not paid up, and about 460 of these are in the western provinces. The aggregate is about \$50,000. The unpaid balances will be collected and legal processes employed to facilitate it, if necessary.

Not only will these shareholders have to pay the balance owing on their stock, but another payment of the value of the stock as the double liability as well. The 161 estates which are shareholders will also have to put up the double liability. Those who hold shares in trust for infants will be in the same class. The shareholders not paid up run from one to five shares each usually, seven having ten shares.

Children Greet Lloyd George

Thousands Released From Toronto Schools to See Visitor

Toronto.—First impressions of Toronto presented for Rt. Hon. David Lloyd George and his party was tumultuously suggestive of coming generations. Thousands of school children, released from school to see Britain's distinguished war premier, lined the route from the Union Station to his first apartment here and greeted him.

Mother! Give Sick Child

"California Fig Syrup"

Harmless, Laxative for a Bilious, Constipated Baby or Child

Constipated, bilious, feverish, sick, colic babies and children love to take genuine "California Fig Syrup." No other laxative regulates the bowels so nicely, the tender little stomach and starts the liver and bowels acting without griping. Contains no narcotics or soothing drugs. Say "California" to your druggist and avoid counterfeit. Insist upon genuine "California Fig Syrup" which contains directions.

Workers Eager For Sick Pay
Ortoba, Mexico.—The day after the new workmen's compensation law became effective in Orizaba—it provides full pay while ill—600 employees reported on the sick list. The day before only six were ill.

Reduction Of Freight On Grain Shipments To Pacific Coast Ports

Victoria, B.C.—Decision of the Railway Board to grant a 10 per cent. reduction in western grain rates is apparently a temporary arrangement to aid the marketing of this year's grain crop, and in no way affects British Columbia's appeal to the Privy Council for an equalization of rates generally. Premier Oliver explained in a statement.

"I do not consider this ruling in any way affecting the merits of our general appeal, but is in the nature of an immediate step to meet a condition which could not very well wait until a decision on the merits of our appeal was reached," said the Premier.

"Our appeal for equalization of rates generally is still before the Privy Council and is not necessarily affected by this decision."

Ottawa.—"I am entirely in agreement with the contention of the provinces of British Columbia and Alberta," said Hon. Frank Oliver, of Edmonton, in his judgment dissenting from the majority decision of the Board of Railway Commissioners on export grain rates from the prairies, "that the grain producers of the prairies, the bulk of whose product must find an export market, has the right to an equal per mile rate west of the National Railways westward to the ocean ports of Vancouver and Prince Rupert as has been given them by Parliament over the same system to the lake ports of Fort William and Fort Arthur."

The majority judgment, in which the other members of the board concurred, made a reduction of 10 per cent. on the export rates on grain from the prairie provinces to the Pacific coast. Commissioner Oliver found that the reduction was inadequate. Mr. Oliver disagreed with the contention of British Columbia that it was proper to compare westbound rates with eastbound rates on a mileage basis, holding that the comparison was valid only where operating conditions were on an approximately equal basis.

To Film Buffalo Hunt

Reported that Indians Will Participate In Killing Buffalo at Wainwright

Edmonton.—Ten thousand "shaggy monarchs of the plains" in wild, tumultuous, mad stampede, with their ancient enemies, the Redskins, stripped to their copper waists, flying on wiry ponies at the flanks of the huge beasts and shooting feathered barbs into vital spots from bows.

Such scenes of bygone days, before the coming of the white man, will be lived again in Alberta in a fortnight's time, when 150 Cree Indians from the Hobbema Reserve, near Wainwright, will be taken to the Wainwright Buffalo Park to help in the execution of some of the 2,000 animals already destined by the Government for slaughter.

Hearing that the buffalo herd was to be cut down, an American movie firm obtained permission to "shoot" just such scenes as they are requiring, with the help of the Indians, and the mad stampede will be one part of the picture.

The Hudson Bay Company's manager at Edmonton, G. Munroe, was approached to help in obtaining the Cree, with the result that J. O. Prest, of that company, has arranged for 150 redmen to erect their tepees at Wainwright as soon as they have gathered in their harvests on the Hobbema reserve.

Needless to say, the arrangement suits everybody, as the Government has to reduce the herd, the movie men want the picture and the Redskins will get well paid for their work. In addition to being tickled to death to get the chance to hunt buffalo.

Work of photographing the herd is at present being carried out in the park at Wainwright, and the picture corporation is prepared to spend \$30,000 on the scenes with the buffalo alone, but the real excitement will not commence until the Indians arrive, under Mr. Prest.

There are two railroad systems in the Philippines with a total mileage of about 500.

For Empire Unity

Lloyd George Wants to See British Empire Strong and Mighty

Toronto.—An Empire message was delivered by David Lloyd George, the war-time premier of Great Britain, during his visit to the city, whose contribution to the world war was one of the most notable in the entire Dominion.

Expressing thanks for the aid given in the war by Toronto and Canada, he made a plea for unity within the Empire and among all its constituent parts that Great Britain may be strong in critical days.

Conditions in Europe, he continued, were such that he feared unless something intervened there might be another catastrophe.

"That's why I want to see the British Empire strong, mighty," he declared, "so that when the cry of war goes up the British Empire will say 'Hail' and then the cry of war will stop."

Canada Impresses Swiss Editors

Visitors Think Country Offers Splendid Opportunity For Emigrants

Montreal.—"We have been deeply interested in the many things we saw in Canada and believe there are splendid opportunities in this country which should appeal to those of our people who desire to emigrate and settle here," declared Ernest Rietman, acting as spokesman for the party of Swiss editors who have been traveling through the Dominion as guests of the Canadian Pacific Railway. Vancouver appealed to Rietman. "It should become a wonderful port when it is developed," he said.

BOILS!

Minard's kills the inflammation, disinfected and relieves.

Danish Prince Comes to Alberta
New York.—Prince Viggo, the farmer-prince of Denmark, and a cousin of King Christian, arrived on the liner Esplanade from Copenhagen yesterday for Canada. He plans to visit his ranch in Alberta.

WOMEN FROM FORTY TO FIFTY

Will Be Interested in Mrs. Thompson's Recovery by Use of Lydia E. Pinkham's Vegetable Compound

Winnipeg, Man.—"Lydia E. Pinkham's Vegetable Compound has done me good in every way. I was very weak and run-down and had certain troubles that women of my age are likely to have. I did not like to go to the doctor so I took the Vegetable Compound and am still taking it right along. I recommend it to my friends and to any one I know who is not feeling well."—Mrs. Thompson, 333 Lisle St., Winnipeg, Man.

When women who are between the ages of forty-five and fifty-four are beset with such annoying symptoms as nervousness, irritability, melancholia and headache, and when their heads ache, dizziness, or a sense of suffocation, they should take Lydia E. Pinkham's Vegetable Compound. It is especially adapted to help women through this crisis. It is prepared from roots and herbs and contains no harmful drugs or narcotics.

This famous remedy, the medicinal ingredients of which are derived from roots and herbs, has for forty years proved its value in such cases. Women everywhere bear willing testimony to the wonderful power of Lydia E. Pinkham's Vegetable Compound.

Women who suffer should write to the Lydia E. Pinkham Medicine Co., Lowell, Ontario, for a free copy of Lydia E. Pinkham's Private Text-Book, upon Ailments Peculiar to Women." O

Here and There

The total quantity of sea fish
landed on both the Atlantic and
Pacific coasts during the month of
July was \$22,043 cwts., valued at
\$2,711,446 to the fishermen, compar-
ed with a catch of \$73,252 cwts.,
valued at \$2,695,780 in July, 1922.

Cattle in north Alberta's livestock
herds now number more than 2,000-
000. This industry and also the
swine industry have increased amaz-
ingly in the northern part of the
Province in the last few years.

Carrying large consignments from
the Dominion Government and the
British Columbia branch of the
Canadian Red Cross, the Canadian
Pacific S.S. Empress of Russia was
the first ship from the American
continent to arrive with relief for
the earthquake and famine stricken
people of Japan.

Nearly \$10,000 in fur royalties
was collected in The Pas, Man., by
the chief game warden last winter.
This does not include the royalties
collected from the Hudson Bay Com-
pany and Revillon Freres, which will
more than double this amount. This
does not include moneys secured
through taxes, licenses and other
sources of revenue.

Cranberry harvest made in Alberta
took a total of 140 prizes out of 236
now offered, or 59 per cent, at ex-
hibitions at Edmonton, Calgary, Re-
gina, Brandon, Saskatoon and Van-
couver this year. Out of 11 open
hampships offered, Alberta exhibi-
tors took 5. In the Calgary exhibi-
tion, provinces competed, in three
there four provinces competed, and
in two others three provinces com-
peted.

British Columbia has reached the
peak of the biggest tourist season in
her history, and it is estimated that
as a result of the enormous
travel and the expenditure of trans-
ients while in the province this
summer will be worth at least \$30-
000,000. The opening of the Banff-
Windermere motor highway through
Canada's rock garden was largely
responsible for this increase in tour-
ist traffic through the Pacific provin-
ces.

Gold producers in the Province of
Ontario during the first six months
of 1923 report production of \$84-
446 ounces gold and \$3,444 ounces
silver, of a total value of \$7,244,081,
shipped by the Porcupine producers,
and from the Kirkland Lake pro-
ducers 69,691 ounces gold and 6,615
ounces silver, of a total value of
\$1,402,373, or from the two camps
a total value of \$8,646,454.

The Canadian Pacific Railway will
contribute \$25,000 for the relief of
the sufferers in Japan and have also
decided that supplies of Canadian
food-stuffs and clothing donated or
purchased with money donated for
relief work, will be transported free
over the Company's rail and steam-
ship lines. President E. W. Beatty
made this announcement while mak-
ing a tour over the Company's lines
in the West with a party of directors.
He added that this action had been
taken because of the reports of the
intense hardships due to the disaster,
and notwithstanding the fact that
the Company had lost heavily by the
catastrophe.

The following editorial recently
appeared in the Windsor "Herald
Star": A recent cargo of silk, en-
route from China to New York,
was shipped via Vancouver and the
Canadian Pacific Railroad and crossed
the St. Lawrence in Ogdensburg,
New York, instead of being sent
across the United States from San
Francisco. The incident offers some-
thing for Canadians to think about.
It proves what a splendid service
the Canadian Pacific offers in its
rail and steamship lines. In a coun-
try like Canada, transportation is all
essential, and the way the Canadian
Pacific has carried on, in spite of
the business difficulties which be-
can with the war and are not yet
smoothed out, is a credit to the na-
tion which conceived it.

Again, the incident calls attention
to Canada's splendid gateway to the
East. Although China is in a chaotic
political condition just now, the
huge Oriental nation offers wonder-
ful trade chances in the future. No
nation is better placed for getting its
share of this business than Canada.

Nova Scotia Interior as Moose Pasture

Nova Scotia is a country of lakes
and streams, offering many ideal
canoe trips, and the interior is a
great moose pasture. Ideal, too,
is the moose hunting, because both
the canoe and automobile are used
by hunters and guides, thus saving
many miles of weary hiking
through the wilderness. On the
Liverpool chain of lakes reached
from South Milford via Annapolis
Royal or Digby, and on Lake Fed-
gemaquoos, Lake Rossignol, Lake
Munro, Long Lake and the Liver-
pool River expert Indian and white
guides use the canoes for long dis-
tances and even call the moose to
the shores with their birch bark
horns. When some distant point is
to be reached from "Del" Thomas
South Milford camp, canoes, guides,
hunters and dogs are loaded upon a
big motor truck for the journey.

South Milford is 15 miles from
Annapolis Royal and is a favorite
outfitting point. So is the Kedje-
makooos Rod and Gun Club, on
famous Lake Kedemaquoos, in the
heart of the wilderness 30 miles
from Annapolis Royal. Both of
these camps have ample accommo-
dations and plenty of canoes and
reliable guides.

The Nova Scotian moose season
lasts from Oct. 1 to Nov. 15. Deer
are as plentiful as moose, and the
open season for this game lasts from
Oct. 16 to Nov. 31.

Moderationists, Attention!

Referendum of November 5th!

ARE YOU REGISTERED?

Remember! No Registration, No Vote!

Enumerators will be at work shortly. The basis for their work is the list used in the Provincial Election for 1924.

If you voted then and have not changed your residence, you should be on the list for the Referendum. If you have changed your residence since 1921, the enumerator should find you and enter your name on the list. But in either case it is up to you to see that your name actually is on the list by getting in touch with your enumerator before October 27.

On Saturday, October 27, two copies of the list must be posted in two of the most public places within the polling subdivision. In the country one of these must be the Post Office nearest to the Poll. **Examine the list for yourself.**

Friday, Nov. 2, from ten to four, the Enumerator must be present at the place mentioned on the lists to add or strike off names. **This is your last chance to get on the list without uncertainty or trouble of being sworn in at the Polls on Polling Day.**

Don't prejudice a great victory by your own carelessness. Make sure of your chance to

Vote "D" and make it Fifty Thousand Majority.

Stony Plain and District.

Captain Gosset motored a party of friends to the City on Sunday, to attend church services.

The local School Board held a special meeting on Monday noon.

The chicken supper at the Methodist Church on Tuesday evening was a huge success.

Officer Cavenagh was a visitor to the City yesterday, on business.

Stony Plain Town Council held a special meeting Monday evening, when the matter of issuing debentures for \$1500 for building a curling and skating rink was up for discussion, and a date set for the vote of the ratepayers to be taken.

Tomorrow, Friday, October 15, the annual Constituency Conference of the W.I. will be held in Stony at the Methodist Church. Delegates from Winterburn, Woodhead and Brightwood will be in attendance.

The threshing outfits in the district are still finding some difficulty operating, owing to the lack of help.

Ludwig Heichel, of Golden Spike, lost a stack of hay in a recent fire.

M Meeklenberg, the eyesight specialist, will be at Royal Hotel, Saturday, Nov. 3.

Thanksgiving Service.

The Thanksgiving service at the Methodist Church on Sunday evening was of a very bright character, the special musical selections being particularly effective. Rev A S McColl was killed to give an address, but, owing to an accident to his motor car on the way down from Wabamun, the reverend gentleman did not put in an appearance till the congregation was being dismissed.

Weekly News Bulletin.

Alberta has won additional honor thru the medium of the Edmonton Grads. basketball team, champions of the world, who have been granted permission by the A.U.C. to represent the Dominion in Paris, France, at the 1924 Olympic games.

Preparations are now being made to commence construction of the million dollar Government storage elevator to be established at Edmonton, on the National Railway line.

With low priced farm lands and heavy yields of grain, in Alberta this year, some farmers have been able to accomplish wonders in the way of financing their farms. Williams Bros. of Consort, purchased a farm in the fall of 1921, which they prepared for crop last year and seeded to wheat this year. They report that the crop they have taken off this fall has paid the expenses and the purchase price of the land in addition.

Schooling by Mail.

The Provincial Department of Education will put into effect a mail course in schooling for people who reside in remote parts of the country, it being expected that from twenty to forty lessons will be given each applicant during the course which will continue thru the winter months. By this method the department plans to place educational facilities within the reach of persons who would not be able to obtain them otherwise.

The correspondence courses will be conducted up to grade 8, an outline to be furnished children with instruction supervised by their parents.

Readers will be furnished without charge and other text books will be provided on the same basis as in the regularly organized school districts. The service will be available only to those beyond the reach of schools.

TOWN OF STONY PLAIN.

Bylaw No. 93.

A Bylaw to provide for borrowing by way of debenture the sum of Fifteen Hundred (\$1500.00) Dollars for the purpose of building a Curling Rink and Open Air Skating Rink in the Town of Stony Plain.

WHEREAS it is desirable to build a Curling Rink and Open Air Skating Rink in the Town of Stony Plain on the Agricultural Grounds owned by the Town of Stony Plain;

AND WHEREAS the total cost for the said purpose is estimated to be the sum of Fifteen Hundred (\$1500.00) Dollars, which said sum is the amount of debt created by this bylaw;

AND WHEREAS it is desirable to provide for the cost of same by the issue of debentures and to pass a bylaw therefor;

AND WHEREAS the whole amount of said indebtedness of said debenture is to be paid in annual installments during ten years next after the time when the same are issued and the respective amount of principal and interest payable each year shall be sufficient to pay off the debentures in full at the end of ten years;

AND WHEREAS the total amount of the existing debenture debt of said Municipality is \$1350.00 being Local Improvement debentures, no part of which either for principal or interest is in arrears;

AND WHEREAS the amount of the whole rateable property in the Town of Stony Plain according to the last revised assessment roll of said Municipality is \$1,405.00;

THHEREFOR the Council of the Town of Stony Plain duly assembled knacts as follows:

1. This Bylaw shall take effect on the final passing thereof;

2. That debentures of the Town of Stony Plain to the amount of Fifteen Hundred (\$1500.00) Dollars be issued for the purpose aforesaid and that such debentures bear interest at the rate of seven per centum per annum payable in annual equal installments during ten years next after the time when the same are issued and the respective amount of principal and interest payable each year shall be sufficient to pay off the debentures in full at the end of ten years, the debentures shall be payable at the Canadian Bank of Commerce in the Town of Stony Plain, and shall be in denominations of \$100.00 each.

3. That the said Debentures and all Coupons thereof shall be signed by the Mayor and Secretary-treasurer of the Town of Stony Plain and such debentures shall be sealed with the Corporate Seal of the Town of Stony Plain;

4. During the ten years of the currency of the debenture the sum of \$233.57 shall be raised annually for the payment of the said installments of principal and interest by a sufficient special General rate on all the rateable property in the Town of Stony Plain;

5. That the said Debentures be sold

Dance at Holborn.

A dance will be given for the benefit of widows and orphans of the Navy League of Canada at Mr W C Williams' new granary, one half mile north of the Holborn School, on Friday evening, October 26th. Everybody welcome. Ladies please bring baskets.

and the proceeds thereof be expended in or towards the construction of the said works.

6. The Vote of the Burgesses duly qualified to vote on this bylaw shall be taken on FRIDAY, THE NINTH DAY OF NOVEMBER, 1923, at The Town Hall, Stony Plain, from the hour of Ten O'clock in the forenoon till the hour of Nine O'clock on the afternoon of the same day.

7. That F. W. Lundy, Secretary-Treasurer of the Town of Stony Plain, shall be the Returning Officer to take and receive the said Votes.

8. The Returning Officer shall at F. W. Lundy's Office, Stony Plain, on SATURDAY, the Tenth Day of November, 1923, sum up the Number of Votes for or against this Bylaw and declare the result thereof.

Read a First and Second time and passed provisionally in Council this Fifteenth day of October, 1923.

F. CORACK,

Mayor.

F. W. LUNDY,

Secretary-Treasurer.

NOTICE.

The foregoing is a true Copy of a proposed Bylaw which has been introduced and provisionally passed by His Worship the Mayor and Council of the Town of Stony Plain and which will be finally passed by His Worship the Mayor and Council on the event of the assent of the Burgesses being obtained thereto, which said date is Friday, the Ninth Day of November, 1923, and the place and time for voting will be at the Town Hall, Stony Plain, from the hour of Ten o'clock in the Forenoon till the hour of Seven o'clock in the Afternoon of the same day; of which all persons are hereby required to take Notice and govern themselves accordingly.

DATED at the Town of Stony Plain, Alberta, this Sixteenth Day of October, 1923.

F. W. LUNDY,

Returning Officer.
